- Enterprise (10,001+ Employees)
- Hospitality Industry
- Uses FireMon Security Manager, Policy Optimizer, Policy Planner, and Risk Analyzer

Robert's Advice

"I think the product is well suited for an environment with multiple, complex firewall deployments. Environments that are highly regulated and a have need for automation and reporting, would gain value."

"FireMon - Great Enterprise Tool"

Vetted Review Verified User

Why Robert Needed FireMon

"We are in a highly regulated industry, SOX, MICS (gaming), and PCI, to name a few. For security best practices, we need a tool to leverage integrated reports to help identify unused rules and objects."

How Robert Uses FireMon

"FireMon is being leveraged across several IT Departments, including IT Security, Risk Management, Engineering, and Architecture teams. From an engineering and architectural approach, we leverage anything from policy creation and optimization, to ping path analysts to make sure the correct firewalls and policies are submitted the first time. With close to 100 firewalls, this helps streamline the process."

What Robert Likes Most About FireMon

"Built-in compliance and security reporting - By scheduling reports, we automate the information gathered and get it to the correct department for remediation, freeing up resources for other tasks."

What Robert Has Achieved With FireMon

"FireMon enables non-firewall savvy people to gather enough information to make an intelligent, firewall policy request. Automation of reporting frees up a ton of resources by sending the appropriate information to the different teams."
